

Key Findings from Engagement with the Utility Sector

Dissen, Jenny^{1,2}, Ellen Mecray³, Tim Owen², and Mike Brewer²

¹Cooperative Institute for Climate and Satellites - North Carolina

²NOAA National Centers for Environmental Information

³NOAA Regional Climate Services

NOAA NCEI Information Services team and its partners have been engaging with the utilities industry over the past few years to understand environmental information needs as well as demonstrate how NOAA environmental data is being used in the context of utility operations. This discussion will broadly portray the key findings from the engagement discussions, requirements raised by managers and leaders from the industry, and a perspective on what information services and analytics could help advance climate adaptation and risk management activities.
