

## ***Using Maps to Build Coastal Resilience***

**Fauver, Stephanie** and Bethney Ward

*NOAA Office for Coastal Management*

The Coastal Flood Exposure Mapper is an easy-to-use web-based tool that allows users to explore, save and share maps that show people, places and natural resources exposed to coastal flood hazards. NOAA OCM has developed a web-based training, *Using Flood Exposure Maps*, that demonstrates how to use the Coastal Flood Exposure Mapper and highlights how practitioners are already using the maps to have productive and meaningful conversations about how to improve resilience to coastal hazards in their community. Join us in an engaging presentation that will demonstrate the web based tool and training, share future expansion plans, and highlight how communities are using these powerful tools.
